I'm half way through with my fixes, and was going to resend all (including P-49, which now has its blue line fixed for Benzene) when done, so I'll do it, but please look hard when you get them to make sure I didn't miss any.

Carol and Wally,

The attached chart **looks great!** Thanks for fixing it and I'm looking forward to getting the others. One question, I'm wondering if we should bold the concentrations exceeding the Part 201 DWC. What's your thoughts? I know you spent a lot of time on the charts. If you want, I can do it on my end, if you think we should make this change. SHari

Wanted to send you this first fix to see what you think. I was able to add the fall date to the axis by adding in a sample date for spring of 2014 without adding any data and that shifts things over and makes room for another date. And I made it place dates on the axis for every 6 months. Does that look OK?

the reason for no line being drawn between April 2012 and April 2013 for Benzene is that there is no data point. Benzene was not sampled/analyzed during the October 2012 sampling event, and the sampling date is in the table, but there is no data to go with it, Excel automatically does not draw the data points. I could force it to by creating a new table for benzene which does not include the fall 2012 sampling date. (It would be one of those tables not included in the printout that will take longer. So, wanted to know how important that is to you.
